SUMMARY

Recent B.Tech graduate in Computer Science (AI/ML) with hands-on experience shipping real products – a live full-stack Django food-delivery platform with Real OTP verification, payments and GPS tracking, an agentic voice AI assistant, and deep-learning models for medical imaging. Seeking a Python/AI developer role where I can apply strong fundamentals and AI-Agentic workflows to build scalable, real-world applications.

EDUCATION

CMR College of Engineering & Technology <i>B.Tech, Computer Science and Engineering (AIML)</i>	June 2026 CGPA: 7.01
SR Edu Centre <i>Intermediate (MPC)</i>	August 2022 Percentage: 78.9%
Srinivasa Ramanujan Concept School <i>10th Standard (CBSE)</i>	June 2020 Percentage: 72.8

SKILLS

Languages: Python, HTML, PostgreSQL

Frameworks & Libraries: Django, TensorFlow, Streamlit

Databases: PostgreSQL

APIs & Integrations: Firebase API, Google Maps API, Razorpay

Tools & Version Control: Git, GitHub

PROJECTS

Food on Fire – Full-Stack Food-Delivery Platform – *Django, PostgreSQL, Razorpay, Firebase* | Live: foodonfire.in

- Built and deployed an end-to-end production platform: customer ordering, restaurant dashboard, delivery-agent tracking, and admin panel.
- Integrated Razorpay payments, Firebase OTP-only authentication, and live GPS order tracking via the Google Maps API.
- Diagnosed and fixed a production Razorpay webhook signature mismatch, securing the live payment flow.

Jerry – Agentic Voice AI Assistant – *Python, Whisper, LLM Tool Use* | GitHub

- Built an always-on Windows voice agent with “Hey Jerry” wake-word detection and Whisper speech-to-text.
- Designed an LLM-powered tool-use loop that launches apps, drives the browser, and performs desktop tasks from voice commands.

LeadGen AI – B2B Lead Discovery Tool – *Python, Flask* | GitHub

- Developed an end-to-end AI lead-generation tool with user authentication and session management for personalized data storage.
- Built a Python backend that turns user parameters (service, target audience, region) into structured, high-accuracy leads with one-click Excel export.

Cervical Spine Fracture Detection – *Python, TensorFlow, Streamlit* | Team: 3

- Built an AI model using MobileNetV2 and EfficientNetB4 to detect cervical spine fractures from CT scans with high accuracy.
- Implemented Grad-CAM for explainable AI, enabling precise fracture localization and vertebra identification (C1–C7).
- Enhanced diagnostic reliability by mapping results to a medical knowledge base detailing symptoms, causes, and treatments of each vertebra.

ACHIEVEMENTS

- Led the organizing committee of “Nexus” E-Summit, a flagship entrepreneurship event featuring top startup founders, industry speakers, with 700+ participants and competitions with a Rs.25,000 prize pool.
- Represented E-Cell IIT Bombay at CMRCET, promoting entrepreneurship and innovation through workshops, coding events, and startup-focused initiatives.
- Supported coding events, technical sessions, and student-led tech projects as part of the Innovation and Entrepreneurship Board.
